Subject: Big Green Egg
Model: XXL, XL, L, M, S, Mini Max, Mini
Date: August 2, 2017
File: 44.1.A_Big Green Egg

To Whom It May Concern:

The Big Green Egg is a solid fuel appliance and is to be protected as such. However, the Big Green Egg is equipped with a lid which is usually closed during the cooking process. Therefore, protection of the appliance can only be effective when the lid is fully open. The following recommendation is based on actual fire testing of similar appliances.

The Big Green Egg is being used in a commercial kitchen which requires a hood and exhaust duct system that must be protected in compliance with the requirements of the Amerex Restaurant Fire Suppression System Manual, part number 20150.

Protection of the Big Green Egg is to be accomplished by locating the solid fuel nozzle (PN11983) to the front of the appliance at a height of 24" to 42" (610mm to 1067mm). The nozzle is to be high enough that it does not interfere with the lid and directly over the front edge of the open appliance. The nozzle is to be aimed at the center of the cooking area.

The above recommendation is based on sound fire protection through our extensive knowledge of fire testing and kitchen protection. If you need any additional information, please call.

Sincerely,
Derek J. Bryant
