Subject: Hot Top Range-Griddle
Date: February 20, 2017
File: 0005.1.A_Top Range-Griddle

Amerex suggests using the coverage for a range on a hot top griddle. You would use Part Number 14178, 4 burner range nozzles. Each one of the 14178 2-flow point nozzles will cover a surface area of 24" x 24". The nozzles should be located from 18" to 50" above the appliance centered in the middle of the 24" x 24" surface area aimed straight down.

The above recommendation is based on sound fire protection through our extensive knowledge of fire testing and kitchen protection. If you need any additional information, please call.

If you have any further questions please feel free to contact me at (205)655-3271.

Sincerely,
Derek J. Bryant
