Subject: Wok Coverage
Model: Date: April 11, 2017
File: 0020.1.A_Wok 36 Diameter

To Whom It May Concern:

Amerex recommends the use of our single flow nozzle, P/N 11982, for wok cookers up to 24" in diameter. When covering a larger wok from 25" to 36" we recommend the use of 2 single flow nozzles P/N 11982. The nozzles will be located directly above the appliance towards the outer edge of the burner, dividing the wok in half and centering the nozzles over each module. Aiming the nozzles back to the center of the wok so that the discharge of the two nozzles will collide and cancel out any splashing possibility. The nozzles should be located at a height of 40" to 50" above the wok.

The depth of the oil in the wok is generally kept to a minimum to avoid adding an undesirable flavor to the dish being prepared. Maximum depth of the Wok should not exceed 11". If you have any further questions please feel free to contact me at (205) 655-3271.

Sincerely,
Derek J. Bryant
